

Мы рекомендуем установку данного смесителя только квалифицированным мастером. В противном случае гарантия на смеситель может считаться недействительной.

При гарантийном обращении может потребоваться проверка сертификации установщика.

Высокий смеситель-моноблок для раковины FORM  
с боковой ручкой, без донного клапана

ИНСТРУКЦИЯ ПО УСТАНОВКЕ

Производитель сохраняет за собой право вносить  
технические изменения без предварительного  
уведомления.

Данные модели смесителя подходят для трубопроводов с низким и высоким давлением. Они оснащены картриджем с керамическими дисками на четверть оборота, обеспечивающими плавность движения.

Минимальное рабочее давление 0,2 атмосферы, максимальное допустимое давление воды до 2,5 атмосфер. Если давление в системе выше, то необходимо установить регулятор давления воды.

Вся продукция производится из материалов, проверенных и одобренных органами, отвечающими за безопасность водоснабжения, и отвечает Европейскому стандарту EN817, где это применимо.

#### Preparation and bylaw requirements

These taps are single flow so the hot and cold water mix in the body. Water bylaws require that where the hot water is supplied from a tank and cold from the mains, non return valves are fitted on both hot and cold pipes as close as possible to the tap. These are not supplied. Where combination boilers are fitted it is only necessary to shut off the incoming mains and turn the boiler off and non return valves are not required.

#### WARNING

**Before installing the new mixer it is essential that you thoroughly flush through the supply pipes in order to remove any remaining swarf, solder or other impurities.**

**Failure to carry out this simple procedure could cause problems or damage to the workings of the mixer.**

These hints have been prepared for your guidance, you must exercise due care at all times.

We do not accept responsibility for any problems that may occur through incorrect installation.

NOTE: ALL DIMENSIONS IN MILLIMETRES

## INSTALLATION

## INSTALLATION

First shut off your water heating system then, with your mains stop cock closed, open the lowest hot and cold taps in the house and allow to run until the cold storage tank and pipes are empty (the hot water storage cylinder always remains full).

Where combination boilers are fitted it is only necessary to turn off the boiler and shut off the incoming mains.

Fitting isolating valves to the inlet feeds is recommended for ease of maintenance.

### INSTALLATION

**!** Remember to turn off the mains water supply before connecting to any existing pipe work.

Fit the mixer base washer into the groove in the underside of the mixer body, and fully hand tighten. Place mixer in position to see if any alteration to the existing supply pipe work is necessary, make any necessary alterations to the pipe work.

Pass the tails and fixing stud through the hole on the basin from above, and place the mixer in position on the basin.

Screw the fixing nut onto the fixing stud underside basin, finger tighten to secure the mixer body.

Check that the mixer body is correctly positioned and tighten the fixing nut. The tap needs to be fixed firmly, but do not over tighten as damage may be caused to the basin.

### ATTENTION

Having first checked all new connections, turn on the mains stop cock, close all taps except the new mixer and as the system starts to refill check for leaks.

Once you have satisfied yourself that there are no leaks, switch on the water heating.

## MAINTENANCE

### CLEANING THE CARTRIDGE

The concealed cartridge should give trouble free service, but in the event of any problems, servicing is straight forward.

#### To remove the cartridge.

**⚠ First shut off the water supply to the tap.**

Pull out the cap from the handle and with an allen key loosen the grub screw in handle, but do not remove it. Take off the handle, unscrew the cartridge cover and carefully using a correct size spanner unscrew the retaining nut and remove the cartridge. Wash the cartridge with clean running water and make sure that any trapped debris have been removed. Dry and lightly grease the seals (only use silicone grease) and replace the cartridge, retaining nut, cartridge cover followed by the handle.

## CLEANING

The chrome plate we use on our taps is very durable, nevertheless care should be taken when cleaning them. They should be cleaned only with warm soapy water followed by rinsing with clean water and drying with a soft cloth. All finishes are vulnerable to acid attack and some strong substances such as household cleaners, disinfectants, denture cleaners, hair dyes, wine making and photographic chemicals can cause the surface to go black or peel.
